## *International Perspective & Think Tank Innovation*

### **Background**

The world economy has witnessed a recovery in 2013, while it grows at a slow pace. In 2014, the mist of uncertainties for the whole world still exist.

At the same time, China has to go through a series of tough missions: to deal with economic downward pressure; to prevent fiscal and financial risks; to solve environmental pollution; and to narrow income gap, etc. It takes wisdoms from all the parties to resolve these economic and social imbalances.

In this context, China's new leadership pooled much effort to strengthen the development of newly-style think tanks with Chinese characteristics. The intelligence supports from the think tanks would greatly fuel China's further reform and continuous development.

China Development Institute (CDI) was established to meet the requirements of China's reform and opening-up policy. In the occasion of its 25 anniversary, we sincerely invite our counterparts around the globe to share their views on the world development and the functions of think tanks in policy-making.
